

Matthew Stewart

Belfast, United Kingdom | 07438904682 | ms.dev2003@gmail.com | [Personal Site](#) | [LinkedIn](#) | [GitHub](#)

EDUCATION

Queen's University Belfast

Bsc Computer Science

Belfast, United Kingdom

Sep. 2021 - June 2025

- Expected **First Class**
- Areas of focus: Artificial Intelligence, Machine Learning, Cloud Computing & Software Development

Monaghan Collegiate School

Leaving Certificate

Monaghan, Ireland

Sep. 2015 - June 2021

- Secured 566 points
- Areas of focus: Maths (H2), Business (H1), Biology (H1), French (H2), Home Economics (H2), English (H3)

EXPERIENCE

Software Engineering Intern

Rapid 7

June 2023 – June 2024

Belfast, United Kingdom

- Developed an AI-powered tool to automate security vulnerability artifact creation, reducing manual effort by over 93% (from 15 minutes to < 1 minute) and enhancing security coverage for 10,000+ customers against critical CVEs
- Resolved customer-facing issues and developed backend components for the InsightVM platform, improving user experience and system reliability.
- Collaborated in an agile team of four, participating in daily stand-ups and bi-weekly sprint planning.

Security Systems & Network Technician

Rodney Stewart - CCTV & Network Engineer - Part Time

Jan. 2019 – Present

Monaghan, Ireland

- Worked within a team to install, configure and troubleshoot CCTV/Network systems, building teamwork skills
- Built good relationships with clients by delivering high-quality work and maintaining clear communication

Student Demonstrator

Queen's University Belfast

Sep. 2024 – Dec. 2024

Belfast, United Kingdom

- Provided hands-on instruction and academic support for undergraduate students on mathematics in computer science topics, including algebra, predicate logic and linear matrices

PROJECTS

Promptability | Python, React, Docker, Firebase

Sep. 2024 - Present

- A user friendly application where users can interact with Hugging Face & Cloudflare hosted LLMs
- Systematically evaluate, analyse and compare LLM responses to improve prompt optimisation
- Create and manage a custom content library & build prompting templates

Artificial Neural Network for Automated Fake Review Detection | Python, Tensorflow, Keras

Mar. 2025

- Implemented and compared multiple neural network architectures (MLP, CNN, RNN) to distinguish between human-written and AI-generated reviews, applying optimisation techniques such as (Adam optimiser, HE weight initialisation & L2 regularisation) to maximise performance
- The final LSTM-RNN model achieved 90% accuracy and 93% recall with an AUC score of 0.98

Automated facial detection | Matlab

Dec. 2024

- Evaluated multiple feature extraction techniques (HOG, LBP, Gabor, edge detection) and classification algorithms (SVM, Random Forest, KNN, Logistic Regression) to identify optimal combinations for facial detection tasks
- Implemented a sliding window detection algorithm with non-maxima suppression and multi-scale processing to achieve face detection in complex group photographs

Sustainopoly | Java, Java Swing

Apr. 2022

- An interactive Monopoly style board game themed around sustainability.

TECHNICAL SKILLS

Languages: Python, Java, JavaScript, SQL/NOSQL, HTML, CSS

Frameworks & Libraries : React, FastAPI, Springboot, Tensorflow, Keras, NumPy, scikit-learn

Developer Tools: Git, Docker, Kubernetes, Postman
